

## 58450

### Installation Instructions

1. Measure and mark the wall for the desired sink height (1), making sure it is level.
2. Measure the distance between the mounting slots (2) on the back of the sink. Mark the wall based on this distance.
3. Place the basin hanger against the wall and mark the holes in each hanger on the wall.
4. Drill holes in the wall that match those in the hanger.  
**Note:** if you do not hit a wall stud, you **MUST** use wall anchors to safely secure the sink to the wall.
5. Attach the basin hangers to the wall using screws (not included).
6. Place sink over the hangers and test for sturdiness.
7. The sink should have additional holes in the back flange. This will secure it to the wall and prevent it from moving on the basin hangers. Mark the location of the holes on the wall.
8. Remove sink from hangers, drill holes and insert wall anchors.
9. Re-hang the sink and attach it to the wall with screws.

**Tools needed for installation:** • Ruler • Pencil • Level • Drill • Screwdriver
